The landscape of projects out there trying to bring transparency to charity donations

AidCoin

Welcome to the new era of transparent giving. We are developing multiple blockchain based solutions to bring back the trust to the charity sector by making donations trackable and efficient

Alice

Transparent social impact

Alice is a platform that brings transparency to social funding through blockchain technology

<https://alice.si/#Why-Alice>

When you donate on Alice, your money is sure to make a difference...because you only pay if it does!

Binance Blockchain Charity Foundation

Most profitable crypto currency exchange in the world, 500- 1 billion in profit in 2018

Binance has started the Blockchain Charity Foundation. They are looking for partners.

Using blockchain technology, the Blockchain Charity Foundation would be able to track money as it flows from donors to its final destination. Blockchain would make it easier to see which charities are wasting money, which charities are donating the maximum amount to their intended causes, and where your money goes as a donor.

BitGive

Real-time financial transparency and project outcomes. The future of philanthropy is real-time tracking of funds and driving more outcomes on the ground. Join us in leveraging blockchain technology to revolutionize philanthropy.

Giveth

To put it plain and simple: we want to make the process of giving to causes you believe in effective and transparent, and we are using blockchain technology to do so.

Giveth's DApp (Donation Application) is being developed by the Giveth DAC (Decentralized Altruistic Community). We are a community-led project and will not derive any direct profit from the platform. We strive to model the DAC concept as one of the first non-profit blockchain based entities.

Heritage Project by Airbus

Developed by Airbus-owned Silicon Valley outpost A3 by Airbus, it brings together the functionality of Ethereum smart contracts, a Web3 Javascript library, and developer tool, and a decentralized application (dApp) to manage and to interact with cryptocurrency donations and givers.

LittlePhil

Now anyone can be a philanthropist, just raising funds to do implementation.

<https://littlephil.org/>

Little Phil applies blockchain technology so givers can:

Track money all the way to the cause

Be acknowledged by the receiver

Share a Little Phil good moment with them
